F-TL

Specifications

Traffic Lanterns

BT-RGT: Dual red/green traffic light systems, 12 volt 2 wire system.

Software Control
The BT RGT and the VDB101 are used in conjunction with a custom design software package that can be loaded on to a Security Access System to provide full control of the phasing and timing of the traffic light system or ramp control.

Benefits

- Substantial energy and cost saving.
- Long reliable service life.
- Low maintenance.
- Uniform lens illumination.

Features

- High luminous output.
- Operates in high temperatures.
- Moisture resistant.
- LED's driven at low current in order to avoid premature aging.
- Long term reliability and operational life.
- Low output degradation.
- Low sun-phantom intensity
- No veiling reflection
- Durable thermoplastic components
- Exceptional structural strength
